

Data Power Monitoring Corporation

DPMC's patented combination of battery monitoring platforms, predictive trending and analysis methodologies, and web-based monitoring portal, has created an industry standard that the world's most powerful companies rely upon.

Unparalleled Battery Monitoring & Managed Services for 100% Uptime

Who we are:

Data Power Monitoring Corporation (DPMC) originated the integration of battery monitoring equipment and services in 1991; pioneering what has now become a critical industry demand. When "batteries just need to work," the world's biggest and most well-known companies rely upon DPMC.

We're not just providing a battery managed service. Our founding executive team members are industry leaders and very active members of IEEE. They apply their experience and expertise in international battery standards to our automated platform to keep our customers up to date with the latest battery standards. In short, DPMC not only played a key role in establishing battery management service offerings in the U.S., it has also evolved the mission critical power marketplace globally through its worldwide success.

What we do:

DPMC keeps backup battery systems running with its detailed, web-based remote monitoring system, Battery Automated Reporting (BAR), and embedded expert analysis services. DPMC provides real-time visibility into your critical battery status. Our predictive analysis service allows operations teams to plan in advance for individual battery maintenance or replacement—pre-empting power outages before they occur. The service also gives you the data to prolong the life of your battery asset based upon empirical data versus traditional time-based string replacements—providing an ROI on the asset management while also reducing environmental impact.

Our clients:

- Barclays
- Bloomberg
- Charles Schwab
- Cox Communications
- Equinix
- FedEx
- Genpact
- Latisys Data Centers
- Via West
- Qwest Communications
- JP Morgan Chase & Co.
- Oracle Corporation
- Savvis Communications
- Sony
- Walmart
- WebMD

These companies use DPMC as their first-line insurance policy against battery related power failures. Their operations can't afford a single second of downtime...**can you?**

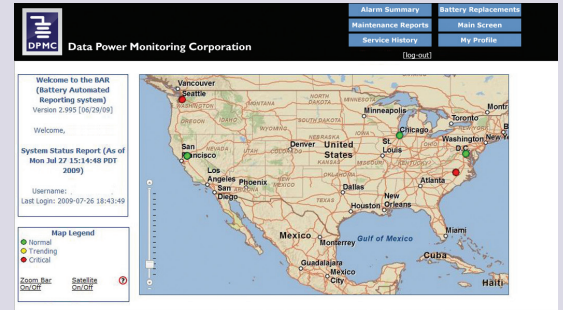

Let unexpected service outages become a thing of your past.

The World's Largest Battery Performance Database: The DPMC BAR

View details for a particular site by clicking on the mapped location icon or on "Alarm Summary" to see a summary alarm log for each battery string at that site.

Battery trending is available by graph which enables you to explore the measurement trends of batteries, as well as groups of batteries on a particular battery string.

The DPMC BAR managed services offering supports thousands of critical backup battery systems via DPMC's unique Battery Automated Reporting (BAR) system. The BAR system is the foundation of DPMC's scalable monitoring programs and is unmatched for its integration of software and methodologies combined with skilled battery experts.

The BAR interface works with all leading industry battery monitor manufacturers on a web-based system accessible via browser or mobile devices. Get quick view reporting and expert DPMC analysis of your sites and systems to identify potential trouble points—and pre-empt developing problems before they lead to failure.

At DPMC, we realize that your business relies on uninterrupted data services. Our system is a key cornerstone in ensuring that your networks are available and your clients are satisfied, making unexpected power outages obsolete.

Get critical database protection on the battery monitoring platform of your choice.

Choose from IntelliBatt, BTECH, Alber, Powershield, Cellwatch, APC or more.
